Dear John,

Please find attached Ian's self explanatory letter about the need for a standard approach to the use of syringe drivers and to pain management.

I'm not sure what mechanism you have for sharing this sort of information with GP's but I'm sure that Ian would be happy to bring it to life for you all if you'd like him to.

It will be adopted within the HealthCare Trust. I will ensure that Huw Jones and his team have a copy.

I would anticipate that Ann Dalby and Judith Goodall will be seeking ways in which they can use/adapt it within Community Hospitals and home settings.

How do you want to play it from the GP end.

Best wishes.

Yours sincerely,

Paula Turvey

Dear Tony

Syringe Driver Prescription

There have been a number of complaints in the Trust in the past two to three years regarding the prescription of Opiates. More recently there has been widespread public concern about this issue and the events surrounding Shipman have highlighted this.

In response to the local concerns the Trust has developed a pain management policy and associated documentation. Allied to this a new prescription sheet has been developed specifically for prescribing by syringe driver. This prescription sheet makes it quite clear what dose to prescribe in 24 hours, and what additional doses and how frequently these may be administered up to a maximum in 24 hours to be set by the prescriber. If the maximum dose fails to control the pain it will be necessary for the prescription sheet to be re-written.

I feel that the new syringe driver prescription sheet gives added safeguards to patients, to the nursing staff administering drugs and to the prescriber.

While this prescription sheet and the associated pain management policy have been devised for use in in-patients, I feel it may be very helpful for this prescription sheet or a variant to be used for prescribing outside a hospital setting.

NHS Trust

2/...

17 May 2001

I enclose a sample syringe driver prescription sheet and a copy of the pain management policy and associated documentation/guidance for nursing staff to use in the assessment of pain.

I should be very grateful if you would draw this (in particular the syringe driver prescription chart) to the attention of all GPs working in community hospitals. As I indicated I also think it would be helpful to consider its wider use across primary care.

Yours sincerely

PAIN MANAGEMENT CYCLE

PORTSMOUTH HEALTHCARE NHS TRUST
CORPORATE POLICY

This policy is supported by the following documents

- Syringe driver variable dose prescription chart
- Syringe driver check list
- Pain management cycle
- Pain management standards

POLICY PRODUCED BY

POLICY PRODUCED

APPROVED BY TRUST BOARD

REVIEW DATE

PORTSMOUTH HEALTHCARE NHS TRUST
CORPORATE POLICY

POLICY FOR ASSESSMENT AND MANAGEMENT OF PAIN

BACKGROUND

Despite dramatic advances in pain control over the past 20 years, many patients in both hospital and community continue to suffer unrelieved pain and up to three-quarters of patients experience moderate to severe pain whilst in hospital. Pain control in hospital has long been documented as ineffective and problematic. Effective problem - solving skills and interventions which reflect the multidimensional nature of pain are required for effective pain management and there needs to be a logical link between the assessment of the problem and the desired outcome.

1. PURPOSE

This policy identifies mechanisms to ensure that all patients/clients have early and effective management of their pain and or distress .

2. SCOPE

This policy provides a framework for all staff working within the Trust who are involved in direct and indirect care. All individual guidelines, protocols and procedures to support the policy must have been approved by the appropriate professional group.

3. RESPONSIBILITY

It is the responsibility of all professionals and support staff involved directly and indirectly in care to ensure that patients/clients

- have their pain and distress, initially assessed and ongoing care planned effectively with timely review dates.
- are informed through discussion of the proposed ongoing care and any need for mechanical intervention

3.1 All professionals are responsible for:

- assessment
- planning
- implementation of action plans
- evaluation
- clear documentation
- liaison with the multiprofessional team

Nurses are also specifically responsible for the:

- administration of the prescribed medication

Medical and Dental staff are also specifically responsible for:

- appropriate prescribing of medication
- clear unambiguous completion of prescription sheet

PAM's are specifically responsible for:

- prescription of therapies
- providing appropriate aids

PORTSMOUTH HEALTHCARE NHS TRUST
CORPORATE POLICY

Service lead groups are responsible for:

- ensuring that the pain management standards are implemented in every clinical setting
- ensuring that the necessary resources and equipment is available
- ensuring that systems are in place to determine and access appropriate training and that qualified nurses can evidence their competencies
- ensuring that standards are being maintained by regular audit and monitoring

4. REQUIREMENTS

4.1 Pain Assessment

All patients/clients who complain of or appear to be in pain must have an initial assessment to establish the type/ types of pain their experiencing.

4.1.1 Systems must be in place to ensure that:-

- all qualified nursing and medical staff have the required skill to undertake pain assessments and manage pain effectively.
- a local 'agreed' pain assessment method is implemented.
- a local 'agreed' documentation method is implemented
- all staff have the required training to implement and monitor the 'pain standards'

4.1.2 All professional staff are required to:-

- exercise professional judgement, knowledge and skill
- be guided by verbal and non verbal indicators from the patient/client/ re intensity of pain
- be guided by carer/relatives if appropriate
- document site and character of the pain
- share information with the care team to enable a multiprofessional approach to the management of the patient/client
- plan on going care where possible with the patient , documenting clear evaluation dates and times
- ensure documented evidence supports the continuity of patient care and clinical practice

4.2 Prescribing

A clear unambiguous prescription must be written by medical staff following diagnosis of the type/types of pain.

- The prescription must be appropriate given the current circumstances of the patient/client
- If the prescription states that the medication is to be administered by continuous infusion (syringe driver) the rationale for this decision must be clearly documented
N.B (**The continuous infusion route is not more effective than the oral route**)
- All prescriptions for drugs administered via a syringe driver must be written on a prescription sheet designed for this purpose
- Systems must be in place to ensure staff have the access to appropriate medication guidance and the analgesic ladder.
- Systems must be in place to ensure staff have the skill to implement the above

5. AUDIT/CLINICAL GOVERNANCE

The systems in place to support this policy should be subject to an annual audit based on the requirements of this policy and should feature in annual clinical governance plans and reports
